PROFESSIONAL SUMMARY

Dedicated Software Developer combining a background in Computer Science Engineering with practical experience in backend and frontend technologies. Skilled in translating technical requirements into functional, user-friendly applications using Java, Spring Boot, and MongoDB. Ready to bring a strong work ethic, a proactive learning attitude, and hands-on Linux/Git expertise to a dynamic tech environment.

TECHNICAL SKILLS

Languages	Java,Python, HTML, CSS, JavaScript
Frameworks / DB	Spring Boot Django MySQL MongoDB
Tools & Platforms	VS Code , IntelliJ IDEA, Postman, Git, GitHub & Linux
CS Fundamentals	Data Structures, OOP, Operating Systems, DBMS

EDUCATION

B.E. in Computer Science & Engineering — ATME College of Engineering Mysore (2023-2026)	CGPA: 7.1
Diploma in Computer Science & Engineering — JSS Polytechnic, Mysore (2020-2023)	CGPA: 8.15

PROJECTS

Expense Tracker -- [\[Project Link\]](#) | *Java, Spring Boot, React MongoDB*

- Developed a full-stack web application to track and manage daily expenses using React.js, Spring Boot, and MongoDB.
- Implemented expense management features such as adding, editing, deleting expenses, and organizing them by category and currency.
- Created an interactive dashboard using Chart.js to display weekly, monthly, and yearly expense statistics.
- Integrated REST APIs using Spring Boot and connected them with the React frontend using Axios for smooth data communication.
- Implemented report generation functionality to download expense data in Excel (Apache POI) and PDF (iText) formats.

OMITAKS --[\[Project Link\]](#) [\[Live\]](#) | *Java, Spring Boot, react JS, Mongo DB*

- Implemented task management features including adding, updating, deleting, filtering, and tracking task status and priority.
- Implemented task management features including adding, updating, deleting, filtering, and tracking task status and priority.
- Integrated AI-based task extraction from natural language text and Gmail emails; WhatsApp chat integration is in progress.
- Built secure REST APIs using Spring Boot with JWT authentication and Google OAuth for user authentication.
- Developed an analytics dashboard to display task statistics and productivity insights.

Geo-Location + Face Recognition Attendance System [\[Project Link\]](#) | *Python, Django, HTML/CSS, MongoDB*

- Developed a smart attendance system using Python and Django that verifies both geo-location and face recognition before marking attendance.
- Implemented geo-fencing using Google Maps API to ensure students can mark attendance only within the authorized location.
- Integrated face recognition using OpenCV and image processing techniques for identity verification.
- Designed role-based access modules for Admin, Staff, and Students to manage classes, geo-fences, and attendance records.
- Used MongoDB with Django for storing user data, attendance logs, and system records.

Certifications / Training

Git and GitHub Basics	Self Learning
Python Programming	Online Course
Linux Fundamentals	Self learning

CORE COMPETENCIES

Communication | Problem Solving | Time Management | Teamwork | Management Skills | Calm Under Pressure | Adaptability
